Total Culling Concept group, the solution

NOFF™

The NOFF can be used in two situations where its designed for the culling of pigs and the situation to kill turkeys, geese or ducks The NOFF is a sea container that has been fitted with two access doors on the cross sides. The floor is moveable and transports the animals our boxes from one way to the other.

In case for the use of poultry killing:

The cage containers are driven in and out of the shed using a four-wheel drive forklift truck, to be positioned in the NOFF. After the final container has been positioned, the doors on both sides are closed and the gas is turned on.

The gas concentration in the container is controlled entirely from the outside of the NOFF. Once all of the pig/poultry are dead, the doors are opened again and carcasses are or the cage containers are then emptied out into the trucks used to transport carcasses.

- System : non-stop by means of 8 catches + analyser
- Capacity : 450-1000 pigs depending of their size from 0.5 kg – 450 kg per piece all ages
5000 – 7500 chickens or 1500– 2500 turkeys per hour
- Cycle : 8-15 minutes
- Application : large quantities of stock such as Pigs piglets, poultry, wildfowl, duck, mink etc
- Users : culling, termination of infected companies or preventative measures
- Dimensions : length x width x height 6000 x 2400 x 2400mm
- Accessories : equipment trolley (lighting, spools, gas lines, spanners etc)
- Work area : 120m²
- Weight : 4800kg per unit
- Connection : 380V
- Gas : CO2 and Nitrogen
